BORIS TIKHONOV

PYTHON DEVELOPER

boris.tikhonov.21@gmail.com

SUMMARY

Python Developer with 1.5 years of experience specializing in building scalable backend systems and RESTful APIs. Proficient in modern Python frameworks (Django, FastAPI), cloud platforms (AWS), and containerization (Docker). Strong background in system architecture, database optimization, and implementing secure authentication systems. Passionate about clean code and best practices.

SKILLS

- Python
- Django
- DRF
- FastAPI
- SQLAlchemy
- PostgreSQL
- MongoDB
- Swagger
- Scrapy
- unittest
- pytest
- GitHub Action
- GitLab CI
- Docker
- AWS
- Pandas
- BeautifulSoup
- SOLID
- Design patterns
- JWT
- OAuth2
- Google Auth
- Redis
- Selenium

EDUCATION

Berdyansk State Pedagogical University **2019 - 2024**

Master's of Vocational Education in Computer Technologies

PROFESSIONAL EXPERIENCE

Brainhub, Python Developer **Dec 2024 - Mar 2026**

GreenTrack Analytics (GreenTech)

- Built environmental data collection and analysis platform for carbon footprint tracking, processing sensor data from IoT devices.
- Developed RESTful APIs with Django REST Framework for mobile and web clients, implementing JWT authentication.
- Deployed application on AWS using Docker containers, with PostgreSQL for structured data and S3 for document storage.
- Optimized database queries and implemented caching strategies, reducing API response times by 35% for frequently accessed environmental metrics.

Task Management System (Productivity)

- Developed web-based project management application with task creation, assignment, and progress tracking features.
- Implemented filtering, sorting, and priority system with deadline management and user notifications.
- Built secure authentication system and role-based permissions for team collaboration.

Web Scraping Platform (Data Collection)

- Created modular web scraping framework using Scrapy and BeautifulSoup for extracting data from various websites.
- Implemented anti-bot protection bypass mechanisms and data cleaning pipelines with Pandas.
- Designed MongoDB schema for flexible data storage and export functionality to CSV/JSON formats.
- Built monitoring system for scraping jobs with error reporting and retry mechanisms.

Analytical Platform for User Metrics (SportTech / Analytical Tool)

- Developed a high-performance backend application using FastAPI to track user workouts and athletic progress, ensuring low-latency data processing.
- Designed a flexible data schema in MongoDB using Beanie ODM, bridging Python object models with a document-oriented database for seamless data persistence.
- Implemented a full CRUD lifecycle for managing exercises and metrics, enforcing strict type safety and data validation with Pydantic v2.
- Containerized the entire infrastructure using Docker Compose, streamlining the deployment of the API and database in isolated environments.
- Built a comprehensive testing suite with Pytest, achieving 95% code coverage and ensuring high system reliability and stability.

ADDITIONAL EDUCATION

- Python Course at Beetroot Academy
- SQL Course at w3schools
- Clean Code by Robert Cecil Martin

LANGUAGES

- English: Upper-Intermediate
- Russian: Native
