Summary

Java Backend Developer with 5 years of experience building microservices and event-driven backend systems using Java and Spring Boot.

Focused on designing backend logic that solves real operational problems — including task prioritization algorithms, recommendation systems, and event-driven workflows.

Experienced with REST APIs, Hibernate, Spring Boot, PostgreSQL, Kafka, Docker.

Experience

Java Software Developer

LLC Axio *Oct 2022 – Present*

- Backend developer on a microservices CRM platform for managing industrial mining service centers.
  - Designed and implemented **repair task prioritization** using weighted scoring based on device profitability, downtime, and urgency.
  - Integrated external mining analytics service (**WhatToMine API**) for profitability-driven decision logic.
  - Developed an **engineer recommendation system** using a fitness-score model based on KPI metrics, model-specific experience, repair speed, and workload balancing.
  - Implemented event-driven workflows using **Kafka** to propagate repair events across services.
  - Integrated **Notification Service** delivering in-app notifications via long polling and SMS notifications through **Twilio**.
  - Ensured asynchronous notification delivery with idempotency and delivery status tracking.
  - Designed backend services that translate operational metrics and business rules into automated decision logic.

Tech: Java 17, Spring Boot, Spring Security, Spring Data JPA, PostgreSQL, Kafka, REST API, Docker.

Java Software Developer

LLC West Solution *Mar 2021 – Sep 2022 1 year 6 months*

- Backend developer on **CloudJava**, a microservices-based backend platform for an online food ordering system.
  - Developed REST APIs using Spring Boot (**Spring MVC**, **WebFlux**).
  - Implemented event-driven communication between services using **Kafka**.
  - Built microservices using Spring Cloud stack (**Config Server, Eureka, API Gateway**).
  - Implemented authentication and authorization using **Keycloak (OAuth2 / JWT)**.
  - Added observability and monitoring using **Prometheus, Grafana, Zipkin**.
  - Implemented integration testing using **TestContainers**.
  - Containerized services with **Docker** and participated in CI pipelines.

Education

Polotsk State University Polotsk, Belarus

Bachelor of Engineering, Electrical and Electronics Engineering *Aug. 2004 – May 2009*

Skills

Language: Java
Frameworks: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate
Messaging: Apache Kafka
Developer Tools: Git, Docker
Databases: PostgreSQL, Redis
Testing: JUnit, TestContainers
Security: JWT Authentication, OAuth2 / OpenID Connect, Keycloak
Architecture: Microservices, Event-Driven Systems
