VITALIY VOLOKHATIUK

Batumi, Georgia | vvlxvt@gmail.com| linkedin.com/in/vitalii-volokhatiuk-818964253 | github.com/vvlxvt

SUMMARY

Python Backend Developer experienced in designing backend architectures, asynchronous workflows, and automation systems built with Django, FastAPI, and PostgreSQL. Shipped multiple production projects covering the full cycle: API development, containerized deployment, and service integrations. Leverages AI tools and custom MCP servers to build smarter, faster engineering workflows. Ready for remote worldwide / relocation.

EXPERIENCE

Python Developer | 2022 - Present

Expense Tracker Telegram Bot

Developed a production-ready Telegram bot for personal finance management with automated expense tracking and categorization.

- Developed asynchronous bot workflows and event-driven handlers using Aiogram 3 and asyncio.
- Designed and implemented REST APIs and database architecture using Aiohttp, SQLAlchemy 2 (Async) and SQLite.
- Built ML-powered expense categorization and fuzzy-search suggestions using scikit-learn and RapidFuzz.
- Developed an analytics dashboard with interactive charts, filtering and time-based spending reports.
- Implemented database migrations and schema versioning with Alembic.
- Containerized and deployed the application using Docker in a Linux environment.

Tech Stack:
Python, Aiogram 3, Aiohttp, aiohttp-jinja2, Jinja2, SQLAlchemy 2 Async, SQLite, aiosqlite, Alembic, scikit-learn, pandas, NumPy, joblib, RapidFuzz, Docker, Linux

Industrial Services Website

Developed and maintained a corporate web platform for presenting company services, projects and recruitment information.

- Designed backend architecture and data models using Django and PostgreSQL.
- Implemented administrative workflows for managing services, vacancies, articles and dynamic website content.
- Developed integrations with external services and automated Telegram notifications for lead processing.
- Configured S3-compatible object storage for scalable media file management.
- Implemented backend security measures including CSRF protection, input validation and environment-based configuration management.
- Containerized and deployed the application using Docker in a Linux environment.

Tech Stack:
Python, Django, PostgreSQL, REST API, S3 Object Storage, Telegram Bot API, Docker, Linux

Price Tracking Parser

- Developed automated data collection services for monitoring product prices across multiple e-commerce platforms.
- Built web scraping and data extraction pipelines for collecting pricing information from multiple sources.
- Implemented asynchronous processing workflows, scheduled tasks and background jobs using Celery.
- Designed data normalization and storage pipelines using PostgreSQL.
- Developed REST APIs for exposing collected data to external services and applications.
- Improved reliability and maintainability of automated parsing workflows through task scheduling and error handling.
- Containerized backend services using Docker for reproducible deployments.

Tech Stack:
Python, FastAPI, BeautifulSoup, Requests, PostgreSQL, Celery, Docker

SKILLS

Languages: Python, C++ (basic)
Frameworks: Django, Django REST Framework, FastAPI, Flask
Databases & ORM: PostgreSQL, MySQL, Redis, SQLAlchemy
AI & Automation: Claude, Cursor, OpenClaw, Model Context Protocol (MCP), AI Agents/Skills
Testing: pytest, unittest, coverage.py, pytest-mock, factory_boy
Tools & Techs: Celery, Async Tasks, Background Workers, Telegram Bot API, BeautifulSoup, Requests, S3
DevOps & Infrastructure: Docker, Linux, Git, CI/CD, Containerization, Deployment
Frontend: HTML, CSS, Chart.js (basic)
Languages: English (Upper-Intermediate, B2), Russian (Native)

EDUCATION

Siberian State University of Science and Technology | 2000 – 2006 | Krasnoyarsk, Russia
Master of Science in Engineering: Automatic Control Systems for Aircraft
